

Energy & Environment

Our team has insight into federal energy and environmental programs and policies and deep knowledge of federal budgeting and the legislative process for these programs. The Spectrum Group has successfully won multimillion dollar federal grants for companies working on port modernization and security, as well as for specific energy technologies.

We have positioned solar, wind, geothermal, and major utility companies to win multimillion dollar federal contracts. We support the grant and proposal process through writing, competitive intelligence and market analysis.

We perform due diligence for energy M&A and produce strategic market analyses and capture plans. We have expertise and have conducted legislative campaigns, performed outreach to stakeholders, and facilitated and developed communications plans and strategies.

Our experience spans defense environmental and energy security, sustainability, climate change, and environmental, maritime and federal energy law.
